

THE BOOKKEEPER

CX-85 Numerical Keypad

User's Guide

A Warner Entertainment Company

The Bookkeeper accounting program and the ATARI CX-85 Numerical Keypad are an ideal combination for quick and easy financial record-keeping. The Bookkeeper maintains accurate records and gives up-to-the-minute financial reports any time you need them. The numerical keypad streamlines data entry to The Bookkeeper.

Using the ATARI Numerical Keypad is really quite easy. Each of the keys corresponds in function to a key on your ATARI 800™ Home Computer. For faster data entry, the numeric keys are arranged in standard adding-machine configuration.

Connecting The Keypad

1. To connect the Numerical Keypad, insert the plug into Controller Port 2 on the front of your ATARI 800 Computer.

2. The cord guides on the bottom of the keypad make it easier to place the keypad to the left, to the right, or directly in front of your computer.

3. Use the keypad to enter menu selections, dates, dollar amounts, and other numerical information to The Bookkeeper.

Using The Keypad

ESCAPE

Returns you to previous menus in The Bookkeeper program as does the **ESC** key on the ATARI 800 Home Computer.

NO YES

Correspond to the **N** and **Y** keys on the computer keyboard. Use these keys to verify entries and batch totals. They are separated from each other to reduce the risk of accidentally accepting an incorrect entry.

DELETE

Corresponds to the **DELETE BACK S** key on the computer keyboard. Allows you to correct mistakes in entries or backspace to previous portions of a journal entry form.

- (MINUS) Use this key when entering negative dollar amounts to The Bookkeeper (such as credit entries to the General Ledger). May be entered before or after the dollar amounts.

+ ENTER Corresponds to the

RETURN key on your computer keyboard. Pressing ENTER causes the computer to recognize an entry you have made.

NUMERIC KEYS

Any type of numeric entry — check and invoice numbers, dates, menu selections, or dollar amounts — may be made to The Bookkeeper using these adding machine style numeric keys. They correspond to the numeric keys along the top row of the computer keyboard. Note that it's not necessary to use the decimal point for dollar amounts entered to The Bookkeeper. However, the decimal point may be used in place of the **/** when entering dates (e.g., 02/28/82 may be entered as 02.28.82).

Troubleshooting

If at any time you have problems entering data to The Bookkeeper accounting program using the Numerical Keypad, try these simple steps:

Check the connection. It may not be inserted snugly or it may have been pulled loose in the process of using the keypad. Push it firmly but gently back into place.

Check the pins. Pull out the jack and look at the nine pins in Controller Jack 2 on the front of your computer. If any of them are bent or broken, you'll need to take your computer to an authorized ATARI Computer Service Center for repair.

Try a game. Any two-player Joystick game will do. Check to see whether a Joystick plugged into Controller Jack 2 will work. If it doesn't, the port is probably faulty and your computer may need service. If it does work, you'll need to take your CX-85 Numeric Keypad into an ATARI Computer Service Center for repair.

Call Atari. Our toll-free number is staffed weekdays, 9:00 to 5:00 (California time). Just dial 800/538-8543 (800/672-1451 in California) for the name of the authorized ATARI Computer Service Center nearest you.
